CASE STUDY-01: Bakery and Cake Shop Website

Create a website for a bakery displaying cakes, pastries, cookies, custom cake designs, product prices, seasonal offers, and store contact details. Use a visually appealing color scheme and image galleries.

Explanation:

The Bakery and Cake Shop Website is designed to display different varieties of cakes, pastries, cookies, and custom cake designs. It provides product images, names, and prices to help customers explore the available bakery items. The website also highlights seasonal offers, discounts, and special cakes for birthdays, weddings, and other celebrations. It uses attractive colours, beautiful images, and a simple layout to make the website visually appealing and user-friendly. The contact section provides the bakery's address, phone number, and email details. HTML is used to create the structure of the website, while CSS is used to improve its appearance and design.

HTML TAGS USED

HTML TAGS USED

Tag	Purpose
<html>	Defines the HTML document.
<head>	Contains metadata, the page title, and the CSS link.
<title>	Specifies the website title shown in the browser tab.
<link>	Connects the external CSS stylesheet.
<body>	Contains the visible website content.
<header>	Displays the bakery name and tagline.
<nav>	Provides navigation links to home, cakes, pastries, offers, and contact sections.
<a>	Creates navigation links and order buttons.

<section>	Separates cakes, pastries, cookies, custom designs, and offers.
<h1>, <h2>, <h3>, <h4>	Display headings and bakery product names.
<p>	Displays product descriptions, prices, and bakery details.
	Groups product cards, image galleries, and offer panels.
<img>	Displays cake, pastry, and cookie photographs.
<footer>	Displays bakery contact information and copyright details.

CSS TAGS USED

CSS PROPERTIES USED (Bakery Website)

background-color – Adds attractive background colors to the bakery website.

color – Sets text colors for headings and content.

font-family – Defines the font style used throughout the website.

display: flex – Arranges cake, pastry, and cookie cards in rows.

flex-wrap – Moves product cards to the next line when necessary.

gap – Adds space between bakery product cards.

width and height – Set the size of product cards and images.

object-fit: cover – Fits cake and pastry images into their containers without stretching them.

border-radius – Gives product cards and images rounded corners.

box-shadow – Creates a shadow effect around bakery product cards for a 3D look.

CASE STUDY-02 : Bus and Train Ticket Booking Interface

Design a travel booking website with source and destination fields, travel dates, passenger details, available services, fare information, and seat-selection layouts. Use forms, tables, and responsive booking cards.

Explanation:

The Travel Booking Website is designed to provide users with an easy and convenient platform to book their travel tickets online. It allows users to enter their source and destination, select travel dates, and provide passenger details. The website displays available travel services such as buses, trains, or flights, along with departure times, arrival times, journey duration, and ticket fares. Users can compare different services, check seat availability, and select their preferred seats using an interactive seat-selection layout. It also provides fare details, including ticket prices, taxes, discounts, and the total amount. The responsive booking cards make it easy to view travel options on desktops, tablets, and mobile devices. Overall, the website simplifies the travel booking process by bringing travel search, service comparison, passenger information, fare details, and seat selection together in one user-friendly platform.

HTML TAGS USED

Tag	Purpose
<html>	Defines the HTML document.
<head>	Contains metadata, the page title, and the CSS link.
<title>	Specifies the website title shown in the browser tab.
<link>	Connects the external CSS stylesheet.
<body>	Contains the visible website content.
<header>	Displays the travel booking website name and tagline.
<nav>	Provides navigation links to Home, Book Tickets, Services, Offers, and Contact sections.
<a>	Creates navigation links and booking buttons.
<section>	Separates search forms, available services, passenger details, fare information, and seat selection sections.

<form>	Collects source, destination, travel dates, and passenger details.
<label>	Provides labels for input fields.
<input>	Accepts source, destination, passenger details, and contact information.
<select>	Allows users to select travel type, passenger gender, and other options.
<button>	Creates search, book now, and confirm booking buttons.
<table>	Displays passenger details, travel schedules, and fare information.
<tr>, <th>, <td>	Define table rows, headings, and data cells.
	Groups booking cards, service details, fare panels, and seat layouts.
<h1>, <h2>, <h3>, <h4>	Display website headings, service names, and section titles.
<p>	Displays travel descriptions, ticket prices, and booking information.
	Highlights fares, journey timings, and seat availability.
<img>	Displays bus, train, airplane, and travel-related images.

CASE STUDY-03 : Adventure and Trekking Website

Build a website showcasing trekking routes, camping trips, difficulty levels, trip schedules, equipment checklists, safety guidelines, and package prices. Use image overlays and visually distinct information panels.

Explaination:

The Travel Booking Website is designed to provide users with an easy and convenient platform to book their travel tickets online. It allows users to enter their source and destination, select travel dates, and provide passenger details. The website displays available travel services such as buses, trains, or flights, along with departure times, arrival times, journey duration, and ticket fares. Users can compare different services, check seat availability, and select their preferred seats using an interactive seat-selection layout. It also provides fare details, including ticket prices, taxes, discounts, and the total amount. The responsive booking cards make it easy to view travel options on desktops, tablets, and mobile devices. Overall, the website simplifies the travel booking process by bringing travel search, service comparison, passenger information, fare details, and seat selection together in one user-friendly platform.

HTML TAGS USED

Tag	**Purpose**
<html>	Defines the HTML document.
<head>	Contains metadata, the page title, and the CSS link.
<title>	Specifies the website title shown in the browser tab.
<link>	Connects the external CSS stylesheet.
<body>	Contains the visible website content.
<header>	Displays the travel booking website name and tagline.
<nav>	Provides navigation links to Home, Book Tickets, Services, Offers, and Contact sections.
<a>	Creates navigation links and booking buttons.

<section>	Separates search forms, available services, passenger details, fare information, and seat selection sections.
<form>	Collects source, destination, travel dates, and passenger details.
<label>	Provides labels for input fields.
<input>	Accepts source, destination, passenger details, and contact information.
<select>	Allows users to select travel type, passenger gender, and other options.
<button>	Creates search, book now, and confirm booking buttons.
<table>	Displays passenger details, travel schedules, and fare information.
<tr>, <th>, <td>	Define table rows, headings, and data cells.
	Groups booking cards, service details, fare panels, and seat layouts.
<h1>, <h2>, <h3>, <h4>	Display website headings, service names, and section titles.
<p>	Displays travel descriptions, ticket prices, and booking information.
	Highlights fares, journey timings, and seat availability.
<img>	Displays bus, train, airplane, and travel-related images.

CSS PROPERTIES USED

background-color – Adds attractive background colors to the travel booking website.

color – Sets text colors for headings and content.

font-family – Defines the font style used throughout the website.

display: flex – Arranges travel booking cards, service details, and navigation links in rows.

flex-wrap – Moves booking cards to the next line when necessary.

gap – Adds space between travel service cards and booking sections.

width and height – Set the size of booking cards, images, and input fields.

object-fit: cover – Fits travel images into their containers without stretching them.

border-radius – Gives booking cards, buttons, and images rounded corners.

box-shadow – Creates a shadow effect around travel booking cards for a 3D look.

overflow: hidden – Hides extra image content outside the rounded card boundaries.

padding – Adds space inside trekking cards and information panels.

margin – Creates space between different website sections.

text-align – Aligns headings, descriptions, and trekking information.

transition – Creates smooth visual effects when users hover over trekking cards and buttons.

:hover – Adds interactive visual effects when users move the mouse over trekking cards and buttons.
